

FECAL OCCULT BLOOD TEST

The McKesson Consult® FOBT test is a fecal occult blood test designed to detect the presence of blood in stool specimens. It uses guaiac-impregnated paper, which allows for greater sensitivity for early detection of even small amounts of blood in the stool. If blood is present, a blue color quickly develops for easy-to-interpret results. The slides have two sample sites for improved detection of positive results, as well as positive and negative monitors to help ensure proper performance of the slide and developer. McKesson's extra sensitive test offers a more vivid color development for even greater readability.

FEATURES AND BENEFITS

- Results are read after just 30 seconds
- In-office use or take-home test options for patient convenience
- CLIA waived test requires no specialized training
- If blood is present, blue color quickly develops for easy-to-interpret results
